“REACH Readiness” Program SABIC Innovative Plastics (September 2008)

Background

REACH is the new European legislation aimed to regulate the Registration, Evaluation, Authorization, and Restriction of Chemical Substances. The legislative process was finalized in December 2006 and the REACH regulation has been in effect since June 1 2007. The first critical REACH program milestone will be substance pre-registration. Pre-registration is only possible between June 1 and November 30 2008. Substances not pre-registered can no longer be used after November 30 2008 until a full substance registration has been completed.

Product Management

Sullins Connector Solutions is not the manufacturer of any raw materials that would require (pre)-registration. Some materials used by Sullins Connector Solutions in the production of our products, however, do require (pre)-registration by the raw material manufacturer or their sub manufacturer. Sullins Connector Solutions has been, and will continue to work closely with these vendors to ensure products supplied to Sullins Connector Solutions are meeting all milestones of the REACH directive. All suppliers to Sullins Connector Solutions have been contacted regarding their “readiness” to REACH, and statements and outlines have been supplied to Sullins Connector Solutions.

A handwritten signature in black ink, appearing to read "M. Hulbert", with a long horizontal line extending to the right.
